Darts Functions Plan

TakeAShot()

// First Select a Target then checks for inaccuracy, modifies points based on what is hit

    // Select what to aim for

    // Depending on target then run function that handles that kind of target

    // Display all the text associated with the target choise, number hit and points scored.

BullInaccuracy()

// Handle checks for misses when aiming at the bull

    // rand check for miss

    // if miss then choose random number 1-20

OuterInaccuracy()

// Handles checks for misses when aiming at singles.

    // rand check for miss

    // if miss then 50:50 chance of missing left:right
